

## TaskPortal Technical Architecture

TaskPortal is a powerful and flexible online collaboration workspace that empowers you to manage all your projects, work tasks, requests and overall general project management activities from a central location available anywhere, anytime. Its user friendly interface will quickly have all teams delivering rapidly, together, as a single unit, improving collaboration and resolution time.

## Software and Hardware Requirements

TaskPortal is based on industry standard technology and implementation standards. The application is designed to work in a Windows based environment and supports a vast range of Windows servers.

There are no non-standard or third party components that need to be purchased or installed. TaskPortal has no dependency on any third party software or hardware for its implementation and use.

TaskPortal is a browser-based application that can be easily hosted within your corporate network environment (LAN or WAN) and can be made available to external users by hosting the application on a web server open to the WWW users (DMZ zone or any public-facing web server).

Enabling technology:

- ASP 2.0
- SSL Certificate (optional for secure internet connectivity if required, not recommended for intranet, LAN or WAN, installations)

Web Server:

- OS: Windows Server 2000 or 2003
- IIS 5 or 6

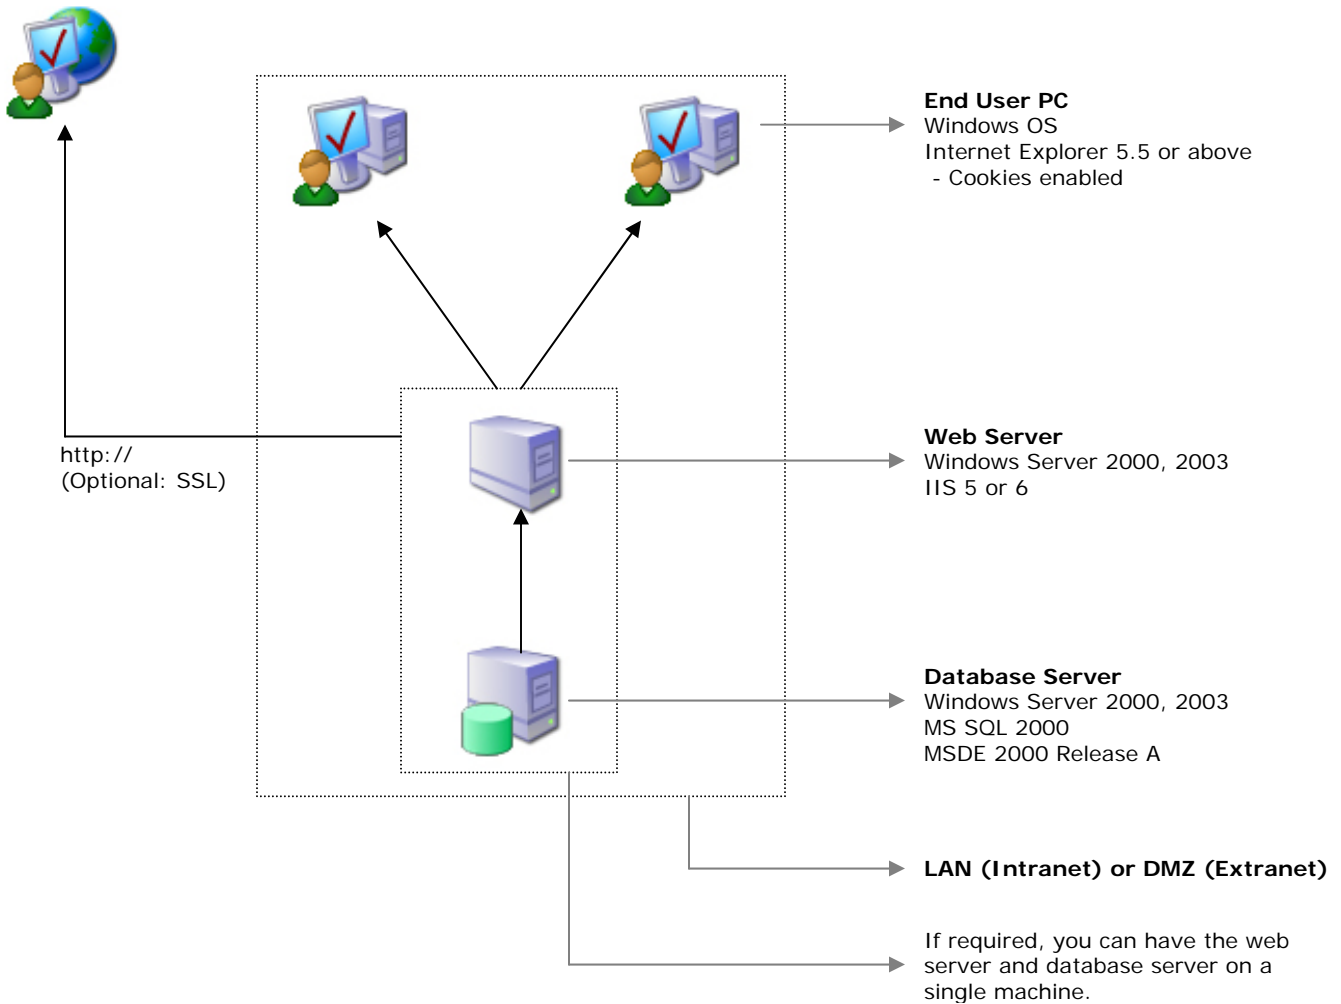

Database Server:

- OS: Windows Server 2000 or 2003
- MS SQL 2000
- MSDE 2000 Release A (*for small to medium companies*)

End User PC:

- OS: Windows
- Internet Explorer 5.5 or above with cookies enabled

## Company Overview

TaskPortal Technologies provides hosted and enterprise web based solutions that help and empower small, medium or large organizations and teams within to improve collaboration, communication and overall daily task and project management.

The company's focus is on providing robust, functionally comprehensive, adaptable and always easy to use solutions geared towards users with a wide range of responsibilities, roles and skill sets.

TaskPortal is a vital tool that empowers line managers, project managers, team leaders and team members to monitor, track and improve on how projects and ad hoc daily tasks are assigned, worked on and finally delivered. TaskPortal creates the transparency all businesses and teams need on daily work load, resource utilization and scheduled tasks, allowing the business to identify possible areas of improvement, and drive business decisions that increase success.

"Imagine a system that could be easily accessed, anytime and anywhere, offering each one the detailed or summarized level of information they need to manage their daily tasks. Imagine a single focal point, standardized method for all communication and complete transparency on work load, priority, status, schedule, service level and much more. Imagine a system so easy to use that it requires no or minimum end user training."

This is the kind of statement that drives TaskPortal Technologies' solutions. This is the kind of information and functionality that TaskPortal provides today, instantaneously, in real-time.
